Raising money for meadow who had been diagnosed with malignant germ cell cancer.

Meadow finished treatment in March and went into remission, but still has ongoing check ups for a further 5 years as there is a risk that the cancer will return and will not be cured until then. Meadow has been through so much and has been given treatment to target the cancer that is designed for adults the potential side effect associated with this are endless including hearing loss, lung and liver problems and infertility.

This type of cancer is rare and effects 1 in 20,000 children per year. It accounts for 1 percent of all childhood cancers.

We would like to raise money to send Meadow to Disney World for a much deserved holiday after such a difficult journey.

Thank You for your support
